

HIGH AND DRY

BOAT LIFTS

Eden Island, Seychelles

Premium Floating Boat Lifts

- ⊗ Aesthetically Pleasing
- ⊗ Positive Buoyancy
- ⊗ Lifts in a Horizontal Plane
- ⊗ Fastest Boat Launch Time
- ⊗ Unrivalled Stability & Simplicity
- ⊗ No Holes Under the Waterline
- ⊗ No Moving Parts on Float
- ⊗ No more Antifouling
- ⊗ Built Tough
- ⊗ No more Galvanic Corrosion
- ⊗ Increased Resale Value of your boat
- ⊗ Reduced Maintenance

South African Designed & Engineered Dry Boat Storage Solution

Aimed at Making Boat Storage Affordable & User Friendly.

The High and Dry Boat Lift was designed and engineered after nearly three years of building and developing boat lifts by a South African engineer. Hence its simplicity and foolproof workability is unrivaled in the international industry. Its siphoning, lifting and lowering technology is the only of its kind in use and will be setting the trend for the future. This boat lift addresses all the drawbacks of the current lifts in the industry and is engineered to last in South African and international waters.

Driving onto the lift is easier than driving onto a trailer. The four floatation bins act as guides with center guides installed if required. By attaching two mooring lines from the back bins onto your center cleat, it locates the boat in the correct position every time.

Lift any Size Boat

Lift Capacity

2000 Kg/ 4400 lbs

3000 Kg/ 7000 lbs

4000 Kg/ 9000 lbs

5000 Kg/ 12000 lbs

6000 Kg/ 13200 lbs

7000 Kg/ 15400 lbs

Operating Depth

1m / 3,3 Ft

1,3m / 4,2 Ft

1,3m / 4,2 Ft

1,4m / 4,6 Ft

1.4m / 4,6 Ft

1.5m / 4,9 Ft

Lift Length

6m / 20 Ft

7m / 23 Ft

7,5m / 25 Ft

9m / 30 Ft

10,5m / 34 Ft

11,5 / 38 Ft

Reduced Maintenance Cost

By simply attaching the blower pipes to the bottom fittings and starting the pumps, the siphoning system is started which will gently launch your boat in a controlled horizontal plain in no time. It raises the boat by attaching the hoses to the top of the connectors and switching on the blowers. Optional automatic systems available – No need to manually switch between top and bottom fittings. The blower box can be mounted permanently on the dockside or it can be stored in a dock box.
